

AI-Powered Personal Finance Assistant

Problem Statement

- Users fail to track expenses efficiently
- Lack of personalized financial guidance
- No prediction of future financial status

Project Objectives

- Track expenses & investments
- Provide AI-based insights
- Predict future savings & risks

System Overview

- User interacts with dashboard
- Backend processes financial data
- AI module generates insights & predictions

Core Features

- Interactive Dashboard
- Expense Tracking & Budgeting
- SIP & Stock Monitoring
- AI Recommendations
- Real-time Alerts

Dashboard Highlights

- Income vs Expense visualization
- Savings trends
- Portfolio overview
- Quick financial insights

Investment Module

- Track SIP investments
- Monitor stock performance
- View total portfolio value

AI Intelligence

- Spending pattern analysis
- Smart saving suggestions
- Future financial predictions

Technology Stack

- Frontend: React.js
- Backend: Node.js / Express
- Database: MongoDB
- AI: Python (ML models)

System Architecture

- Frontend ↔ Backend ↔ Database
- AI Module for predictions
- External APIs for stock/SIP data

Future Scope

- Voice-enabled assistant
- AI chatbot advisor
- Automated investment suggestions

Conclusion

- Improves financial awareness
- Provides AI-driven decisions
- User-friendly and scalable
